

Feature:

1. The switching interval of each channel is 1 second, and each channel has a switch indicator light, which can be turned off with a delay of 5 minutes through software settings.
2. The circuit board circuit uses 60% high-purity tin, high-end shunt technology, and has been strengthened and bolded.
3. Single-channel controlled function can be controlled through computer POWER test software
4. The remote control function can be equipped with an optional remote control with a distance range of 10 meters (with a range of 15 meters without obstruction)
5. Online support allows unlimited cascading
6. Each socket is made of phosphor bronze and is installed after strict testing and complies with national standards.

Specification:

Maximum input current	50A
Maximum output current of single channel	10A/13A
Working voltage	220V/50-60Hz
Each channel power	Max 3000W
Input and output voltage Optional voltage	110V input = 110V output, 380V input = 220V output
output power	8+1 10A socket outputs (8+2 10A socket outputs are optional)
Relay	16A Omron relay
Chassis height	1U
Switch	boat switch
Weight	4Kg
